Security & architecture one-pager · Taugagreining - NerveDX ehf.

Summary. NerveDX is a clinical EEG workflow platform in development. This page summarises public security and deployment commitments for hospital IT, procurement and privacy review. Detailed architecture, DPA text and QMS materials are shared under NDA. Website channels are not for patient or clinical EEG data.

Website vs clinical platform

- This website collects enquiry, newsletter and (if consented) chat data only.
- Do not submit PHI, EEG files, reports or diagnoses via forms, chat or Calendly.
- Clinical EEG processing occurs only in a contracted deployment with agreed residency, roles and support.

Platform design commitments

Topic	Public posture
Encryption in transit	TLS for public website and planned clinical services
Encryption at rest	Platform design commitment for hosted clinical data
Tenant isolation	Institutional separation as a first-class requirement
Access control	Role-based access; SSO (SAML/OIDC) planned with deployment
Audit logging	Review actions, model outputs, confirmations and sign-off
Backup / restore	Design commitment; procedures shared under NDA
Data residency	EU/EEA hosting is a deployment option, scoped per customer

Certifications not yet held

The following are **not** current public certifications or clearances. Development is aligned with the named frameworks where stated on nervedx.ai; do not treat alignment as certification.

- SOC 2
- ISO/IEC 27001
- ISO 13485 certification
- CE marking / EU MDR market placement
- FDA clearance
- HIPAA attestation / HITRUST

Under NDA

- Deployment reference architecture and shared-responsibility summary
- DPA discussion and subprocessor detail for clinical hosting
- QMS / validation summary

- Penetration-test plan or results when available

Request via the contact form (interest: Security / NDA pack) or book a walkthrough at <https://calendly.com/nervedx/30min>

Public information only, not medical advice, not an offer to supply a regulated device, and not a substitute for contract, DPA or intended-use documentation.
